SmartRoom™ for Life Sciences
Accelerate innovation and time to market

SmartRoom™
Powered by **bmcgroup**

Biotechnology and pharmaceutical companies face growing pressures to manage costs and prime the pipeline with new products. As firms move away from their longstanding focus on organic development, many are beginning to embrace partnerships with academic institutions and competitors to fuel collaboration and innovation.

SmartRoom is the secure platform that helps life sciences companies like yours collaborate, manage and streamline complex data sharing processes to get products to market faster and more cost-effectively.

Facilitate Collaboration

During initial research and development phases, SmartRoom helps bring scientists and business leaders together under a secure, cloud-based virtual data room platform. So your team can share and access peer research and other important information, anywhere or anytime.

Organize Clinical Trial Data

SmartRoom lets you build a single, authoritative data repository to ensure appropriate review and oversight controls.

Streamline FDA Approval Processes

Our HIPAA- and FISMA-compliant data capture and storage capabilities let you assemble new drug applications (NDA) and prepare data to submit to the FDA and EMEA for approval.

Adapt to Changes in Strategy

When you're considering the sale of a derivative compound, out-licensing or other alliances, SmartRoom helps ensure you're always ready to provide authorized users with access to critical content to complete your due-diligence faster and more efficiently.

SmartRoom for Life Sciences Provides:

- Immediate access to important data, anytime or anywhere in the world.

- Dimensional security controls that allow you to share information with confidence.

- Global, 24x7 support services from a dedicated project team.

- Distributed work queues to quickly organize, populate and control access to data.

bmcgroup

SmartRoom for Life Sciences helps you manage your organization's most sensitive data, from clinical data repositories to complex regulatory filings to out-licensing and asset sale.

Throughout each step in the process, our virtual data room platform lets you share information and accelerate productivity.

Encourage Collaboration Between Scientists

SmartRoom's upload alerts, document and folder notes, question routing and progress reporting facilitates better communication and improves workflows, so your team can stay on schedule.

Accelerate Due Diligence

Whether you're a startup developing a new product, negotiating an out-licensing or asset sale, or growing by acquisition, SmartRoom helps accelerate your due-diligence process and maximize deal value by minimizing costly defects, delays and risks. With our solution, there's never a time-consuming delay in publishing data to the site. After you upload your data, you can make it immediately available to your users based on their individual security profile.

Streamline FDA Approval Processes

SmartRoom streamlines workflows by providing a HIPPA- and FISMA-compliant data capture and storage environment. When you assemble your NDA online, you can use notes and alerts features to speed reviews and encourage input from team members.

Gather Clinical Trial Data Faster

SmartRoom's cloud-based platform makes it easy to partner and collaborate with third parties and vendors to conduct research and clinical trials. Our easy upload tools allow team members to gather data as they go, so it doesn't take as long to compile clinical trial data.
