MPower Dispatches 5.4MW Blackstart Generators for Yarnima Power Station

Media Release – Monday 10 February, 2014
For Immediate Release

MPower, Australia and New Zealand's leading integrated power solutions provider has dispatched three 1.8MW black-start generators for the Yarnima Power Station project in Western Australia.

The logistics and extensive work health and safety requirements surrounding the movement of the generators was challenging and required careful planning to ensure each 40 tonne generator was carefully placed and secured onto transportation, ready for the 4590 kilometre trip from MPower's Ingleburn factory to Newman in Western Australia.

MPower was awarded the contract in December 2012 and will now assist in the installation as well as commission each generator set that will provide critical power for the mine site.

MPower is proud to provide practical, dependable solutions for projects such as Yarnima Power Station and continues to demonstrate its capabilities within the mining sector through knowledge, innovative technology and experience.
