Macroeconomic Overview – Unprecedented Risks Abound

- **We are experiencing a historically sub-par economic recovery following the unusually deep economic contraction and financial crisis, resulting in a much weaker than normal consumer, business, and investor confidence. Uncertainty surrounding major fiscal issues is not helping**
- **Elevated global sovereign credit risk contributes to the broad and general sense that exposure to risk should be selected and monitored very carefully**
- **The weak economic recovery and elevated global sovereign credit risk has sustained the risk-aversion trade, driving Treasury yields below the rate of inflation and gold prices to nearly \$2,000 per ounce**
- **Global central bankers have put the pedal-to-the-metal in terms of monetary support and stimulus for the economy, but will consumers and financial intermediaries respond to this stimulus?**
- **The “wall of worry” has rarely, if ever, been steeper in modern times**

For The Third Year In A Row The U.S. Economy Presents Mid-Year Risks Of Recession

- **The Institute for Supply Management (ISM) Purchasing Managers Index (PMI) recovered to 51.5 in September after holding just below the neutral 50 level for the prior three months, signaling fragile U.S. economic manufacturing conditions**
- **The U.S. employment situation continues to have trouble gaining traction; initial jobless claims, for the moment, like the ISM PMI, suggest that the economy is barely expanding following 1.3% GDP in the second quarter**
- **Income growth is the engine of consumption and GDP growth**
- **Headline U.S. retail sales have been, and continue to be, quite strong**
- **Large-ticket item consumer purchases have improved recently, but there remains much room for further improvement**
- **Consumer confidence, and large-ticket item consumer purchases should improve as long as economic expansion remains on track**
- **An elongated business cycle and bull market is the ideal antidote for the exceptionally steep “wall of worry,” but the Bernanke Fed appears to be placing all of their “chips” on a recovery in the housing market, and time will tell if this is a good “bet”**

Investor Confidence In Forecasted S&P 500® Earnings Fluctuates – Record Earnings Reported In 2Q 2011 & 2Q 2012, But Stocks Trade Erratically

Source: S&P Capital IQ as of Sep 28, 2012. Please note Q3 2012 and Q4 2012 are estimates. Index returns exclude dividends. For Illustrative Purposes Only. CQ = Calendar quarter. S&P 500 Earnings Per Share is based on S&P CIQ consensus. For use by participants of the S&P Capital IQ Global Impacts and Outlooks Event. Not for distribution to the public. Indexes are unmanaged, statistical composites and their returns do not include payment of any sales charges or fees an investor would pay to purchase the securities they represent. It is not possible to invest directly in an index. Inclusion of fees and expenses in the model or benchmark would lower performance. Past performance is no indication of future results.

Stock Market Outlook – October 2012

- This is a “musical chairs” “risk-on/risk-off” economy and stock market
- As long as the economy continues to expand (i.e. the music is playing), corporate earnings growth should lead the stock market higher and investors will likely continue to embrace risk-assets
- Once recession risks emerge (and the music stops playing) investors will shun risk and return to flight-to-quality asset classes
- Through QE3, the Federal Reserve has placed a very large bet on its ability to sustain the improving outlook for U.S. housing, as a bridge to moderate but sustainable GDP growth
- The question remains, will consumers increase home buying activity?
- It is entirely conceivable that we are just past the mid-point of this expansion cycle that started during the first half of 2009
- But as long as the recovery remains historically sub-par, the economy will remain vulnerable to exogenous shocks (Europe, U.S. fiscal cliff, etc.)

Earnings Update – 3Q 2012 Earnings Estimates

Christine Short

S&P
CAPITAL IQ

Concluding Thoughts

- **The Global Markets Intelligence Group believes Q3 may be a turning point for corporate earnings, as this may be the first negative quarter for S&P 500 profit growth since 2009**
- **Not only are analysts assigning lower earnings expectations to S&P 500 companies, but the corporations themselves are guiding down, and warning about a weak fourth quarter**
- **Two sectors defying the odds are financials and consumer discretionary, both are leading second quarter growth with estimates of 11.8% and 4.8%**
- **The most economically sensitive sectors are expected to be the biggest laggards this season, with cyclical sectors such as materials and energy expected to post the large earnings declines of negative 19.9% and negative 16.9% respectively**
- **Company issued guidance figures for 3Q are the most negative we've seen in sometime. Of the 101 companies that provided guidance, 72 were negative, 22 positive and 7 in-line. This produces a negative-to-positive ratio of 3.3, the most bearish we've seen since Q4 2008**
- **While it is still early in the third quarter reporting season, both the beat rate and surprise ratio for those companies that have reported is historically low. Currently the beat rate for companies that have reported is 59% and the percentage by which those companies have surpassed expectations is a very low 1.08%**
- **Revenue expectations of 1.00% are the lowest we've seen since 3Q 2009, and below the 10-year historical average of 7.0%**
- **Estimates for the balance of 2012 continue to fall, bringing the calendar year estimate down to 4.17%. On the other hand, expectations for 2013 remain relatively strong**

Speakers

Robert Keiser is Vice President, Global Markets Intelligence (GMI) at S&P Capital IQ. His primary responsibilities include the surveillance and analysis of international economic trends and their bearing on multi-asset class relationships. This top down “view” is then balanced against financial market valuation and risk mitigation considerations when evaluating investment opportunities in the global marketplace.

Additional responsibilities include the supervision of GMI analysts producing analysis, research and commentary focused on global capital market activity, the equity and credit markets, mutual funds, and individual global corporate fixed income securities according to the unique risk-reward profiles identified by the proprietary S&P Capital IQ Risk-to-Price (R2P) analytic.

Robert’s two decades on Wall Street include investment strategy and trading positions dealing in the U.S. fixed income, equity, commodity, private equity, and global currency markets. The breadth of this experience leaves him well positioned for investigating relationships between markets by utilizing cutting edge S&P Capital IQ applications.

Robert graduated from Rutgers College, Rutgers University in 1983 with a double-major BA degree in Economics and English. His resume includes past positions held with U.S. primary dealers and international commercial banks including Societe Generale, The Long Term Credit Bank of Japan Ltd, and Lloyds Bank Plc. He joined S&P Capital IQ in June 2008.

Christine Short is a senior manager on the research team at S&P Capital IQ Global Markets Intelligence. Her current responsibilities include analyzing and monitoring aggregated S&P 500 earnings and revenue performance at the sector and industry level. Her observations can be found daily in the Consensus Report which includes historical and forward looking earnings growth figures, company guidance and valuation metrics and is widely distributed to the financial media. Christine graduated from Fairfield University in 2006 with a double-major BA degree in international relations and journalism. Prior to joining Standard & Poor’s in June, Christine was the Director of Earnings Research for Thomson Reuters.
