### BENEFITS

- Offers a single source of truth to help you service members, manage patient care, and increase productivity
- Increases utilization and decreases dependency on ad hoc static reporting
- Provides a consistent source of patient information throughout your organization
- Drives increased productivity with added flexibility
- Enables external delivery to physicians and consumers

### FEATURES

- Comprehensive Patient Health Record from an intuitive display, with easy drill-down and sorting options
- Targeted interface to support the workflow of case managers who need a quick patient view
- Integration of the Patient Health Record into other systems and portals
- Customized view to support unique department information needs
- Easy plug-ins to outside systems and portals

## Improve Member Health and Reduce Costs with Patient Profiling

Truven Health Patient Profiling, delivered as part of the industry-leading Truven Health Advantage Suite™ platform, integrates fragmented data into smart health records. This can increase the effectiveness of your team by avoiding “patchworking” health records from multiple systems. It also assists medical managers, nurse case managers, and healthcare analysts in:

- Identifying appropriate patients and populations to target for disease or care management
- Evaluating high-cost patients, disability, and worker’s compensation cases
- Performing fraud analysis, detecting overutilization, and identifying services that should not happen concurrently

### Greater Speed to Insight

The Patient Profiling module is uniquely positioned to address a critical need — linking the patient information in your databases with the people who deliver care to help improve member health and reduce costs. The following features are offered within the Patient Profiling module.

### Intuitive Interface

Designed for nontechnical users, it enables care management staff to quickly drill down to specific member information.

### Customizable Patient Health Record

Includes views on medical and pharmacy claims, aggregate summaries, predictive risk scores, lab results, and more.

### Easy-to-Digest Reports

Provides comprehensive views of a patient’s health, organized in a meaningful way, at your fingertips. This eliminates the need for ad hoc queries, streamlining your care management processes.

### Patient Profiling is the Missing Link

The Patient Profiling module offers a separate login for users and a streamlined application interface, providing only the functionality needed to fill the needs of the intended audience. Also included with the licensing of this application is the ability to customize the Patient Health Record outputs.

The Patient Health Record enables you to more effectively view each member's health picture to quickly identify gaps in care through an integrated and intuitively organized patient view. Information provided includes eligibility, cost summaries by place groups, utilization, DCG projections, clinical condition, gaps-in-care alerts, recommended care information, and drillable episode summaries in addition to medical, drug, and lab claims details.

**The Truven Health Difference**

As the market leader in analytic methodologies, industry professionals rely on Truven Health products and services to improve the quality and efficiency of care. With leading data assets and extensive experience with health plans, employers, and government entities, Truven Health is uniquely qualified to help you address your business challenges.
