

## Overview

VFA Auditor v4.9 represents the first phase of Mobile Approval Support. This release enhances how VFA's assessors (and some clients) use the product and is the foundation for more advanced future functionality.

Although much of the development effort was focused on Mobile Approval, the team was able to include a few highly requested features that will help make the data collection process easier and more streamlined.

The Product Team is excited to hear how our clients are leveraging the solution to keep their facility data up to date, and remain committed to making an increasingly robust and easy to use solution.

## Mobile Approval – Phase I

- Now clients can enable [select users](#) to collect and [approve](#) facility assessment information right from the Auditor Mobile app.
- New functionality detects when users are setup as both the Survey “Responder” and “Approver” - enabling an “Approve” button.
- Users can confirm Survey Approvals are processed (changes applied to VFA Facility) using a new status window.
- Future functionality (Scheduled for December 2014) will empower Survey Approvers to use the Mobile app to review submitted surveys for Approval or Rejection. Today that activity is limited to the Online Survey screens within VFA Facility.

**Asset Information**

Review the information and make any necessary changes. The results of this survey are based on the information in this section, so it is critical that it be as accurate as possible.

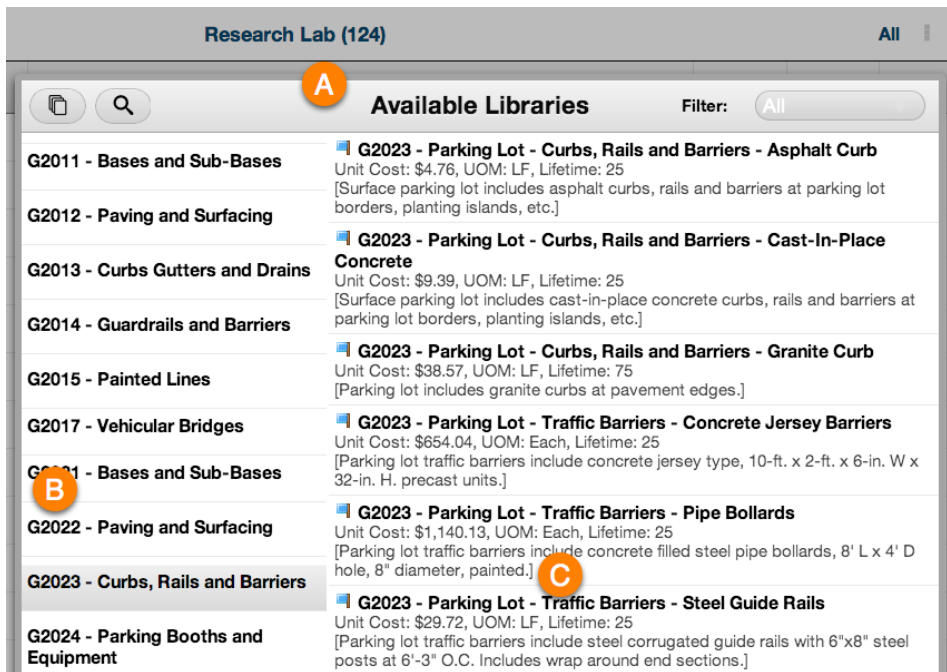

<b>Status</b>	Completed	<input type="checkbox"/> Draft

## Updated Mobile Library Content – Site Linear Systems

Although VFA library updates are instantly available within Auditor we wanted to highlight this new set of content that was made available a few weeks ago. VFA will be publishing additional content updates through out the year to enhance existing System offerings and, as in this case, adding new ones.

- A. [200+ New System Models](#) (Uniformat G) are now available when you re-load the Mobile Library (simply press the Load button in Settings)
- B. [20+ New Uniformat Categories](#) for quick navigation to the desired System model
- C. [Over 1,000 New Requirement Models](#) empowering assessors with pre-configured, site related deficiencies, when assessing facilities.

## Enhanced System Details and Interaction

- **New System Condition Field** – This new field was introduced in VFA Facility’s last release and is now available within Auditor.
  - Clients can configure their own Condition ratings (beyond the default Good – Fair – Poor) to match organization specific condition ratings.
  - Capturing Condition provides another metric to evaluate Systems and now this data can be captured during the Auditor assessment process.

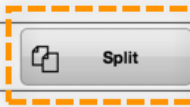

Name	Adhered Membrane (EPDM) Single-F		
Year Installed	1995	X	Constr 19%
Lifetime	25	- +	
Years Remaining	15	- +	Based c 6
Condition Rating	Good		
Quantity (SF)	446		

- **Copy Support for Custom Systems** – The Copy feature is a handy feature that has been available since the Mobile app was developed. Up until now, Copying was limited to VFA Library-based or “Linked” Systems. This release expands the Copy feature to support any System (Standard or Custom).
  - Copying Systems allows users to quickly “split” a System to represent different vintages and conditions. It is a recommended best practice when a more accurate representation of the building is desired.

## Enhanced access to “Split” Requirement feature

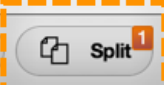

- The “Split” Requirement feature is now accessible from wherever you have Requirement data.
  - [Asset Requirement List](#) – An aggregate view of ALL Requirements within a Survey.
  - [System Requirement List](#) – Requirement list associated with a single System.
  - [Requirement Detail View](#) – Where all Requirement details reside.
- Auditor v4.7 introduced the “Split Requirement” feature last year allowing users to split a (non-renewal) Requirement to represent partial work completed.
- Client feedback highlighted the fact that the feature was only available on a single screen, forcing needless navigation to perform the split. We’re happy to report this release removes that limitation – happy splitting!

Thank you for your support and continue to send along product feedback and suggestions to [help@vfa.com](mailto:help@vfa.com).

The image shows a tablet displaying a software interface for Aurora Elementary School (114). The interface features a table with the following columns: Requirement Name, Linked System, Category, Priority, and Est. Cost. The table lists various maintenance and renewal requirements with their corresponding system IDs, categories, priorities, and estimated costs. At the bottom of the screen, there are navigation buttons for 'Close Requirement', 'Re-Open', 'Copy', and 'Remove', along with a dock containing icons for home, back, forward, search, and refresh.
