## HPE / VMware 帶您進入下一代的融合式資料中心

郭裕昇

HPE 伺服器事業處 產品協理

# In FY12, HP launched its five year transformation journey

# The separation will enable both Hewlett Packard Enterprise and HP Inc

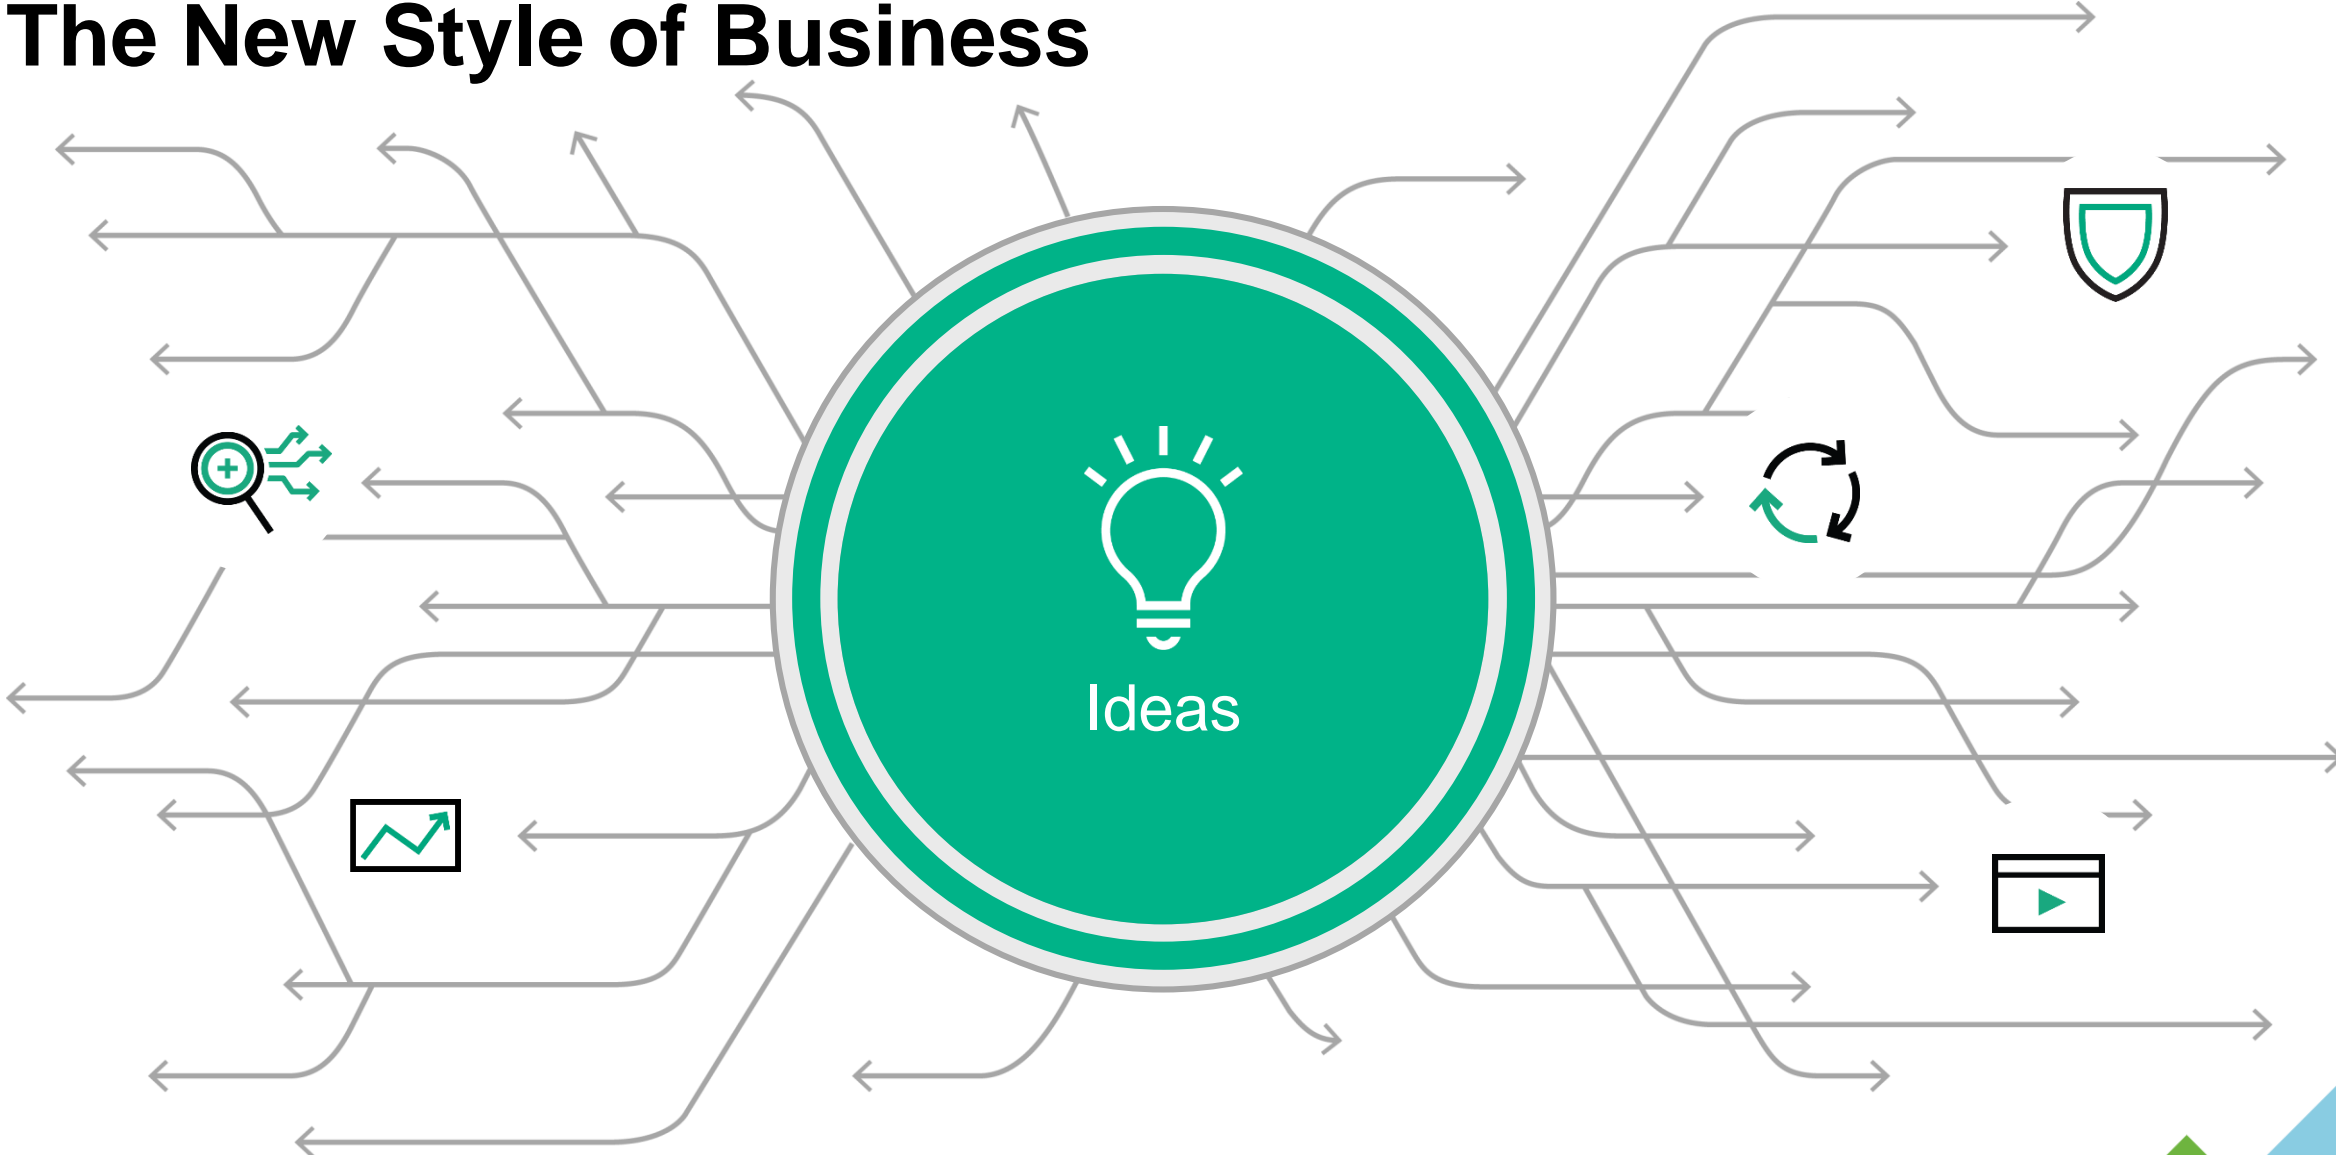

- 🌐 More innovation in go-to-market, business models, products and solutions
- ↔ Increased executive and customer engagement
- ✓ Tighter set of metrics to drive the business
- 📈 Strategically defined and focused
- 💰 Increased focus on growing revenue
- 👥 Performance management
- 👤 More competitive cost structure

# New Style of Business

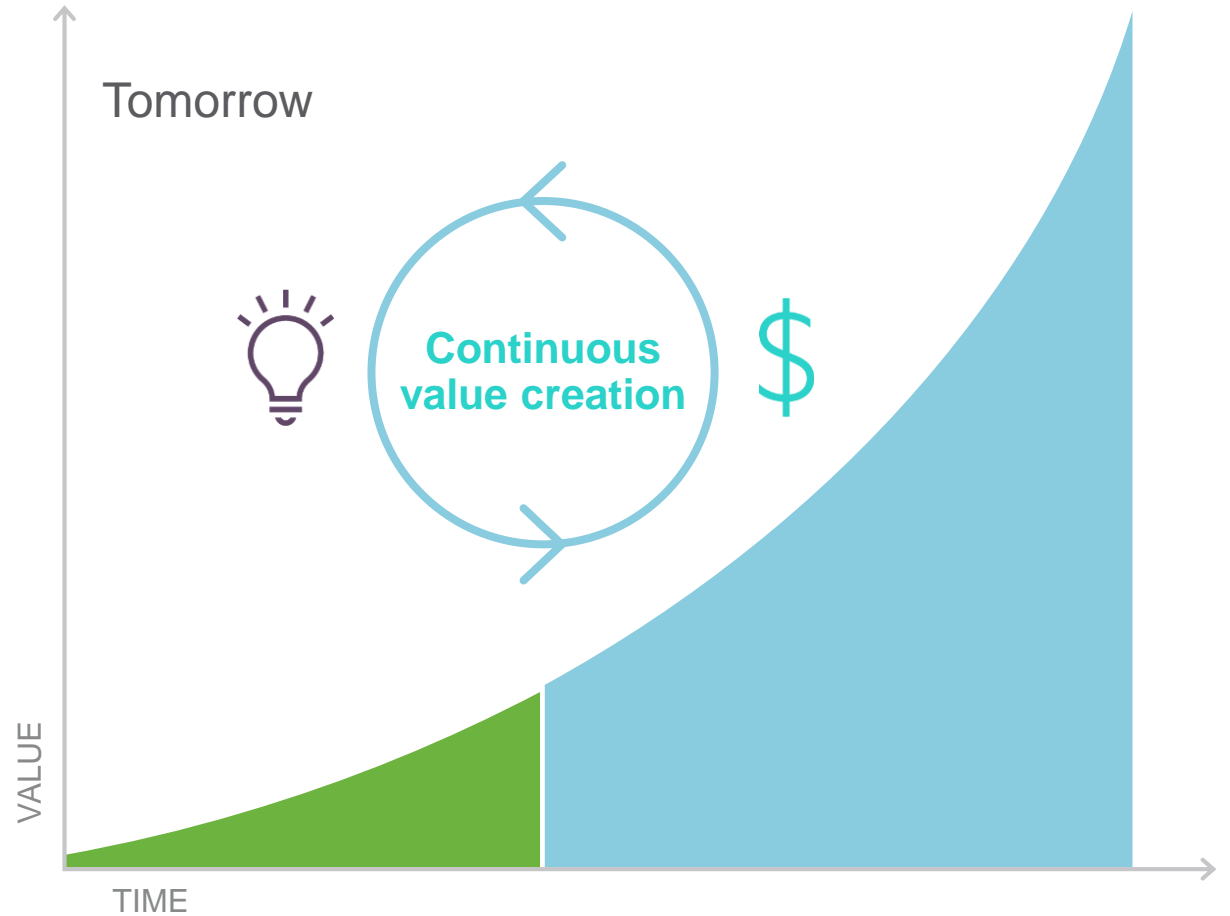

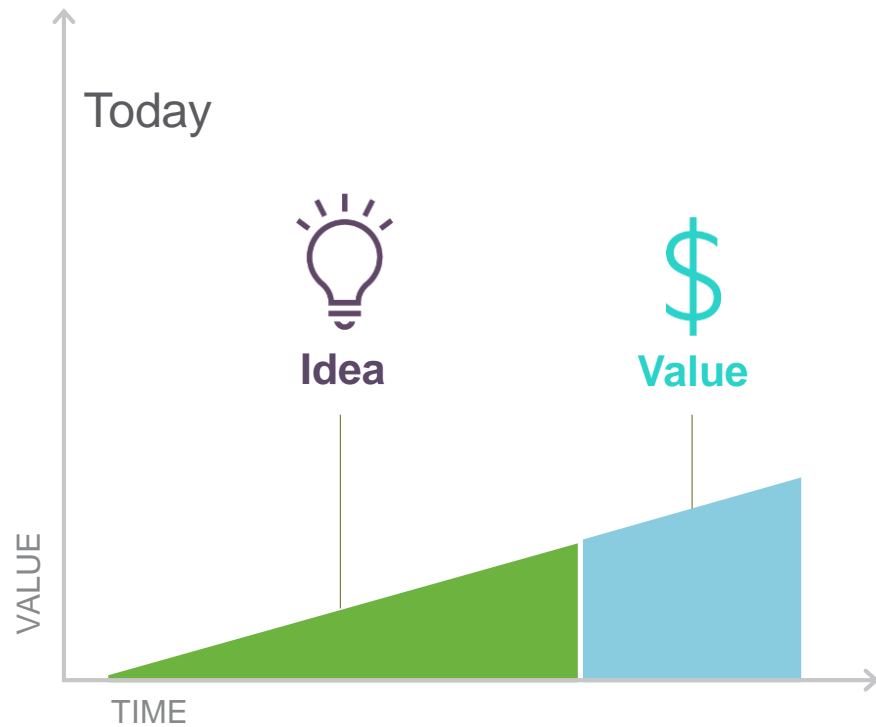

vmware®

 Hewlett Packard  
Enterprise

# The New Style of Business

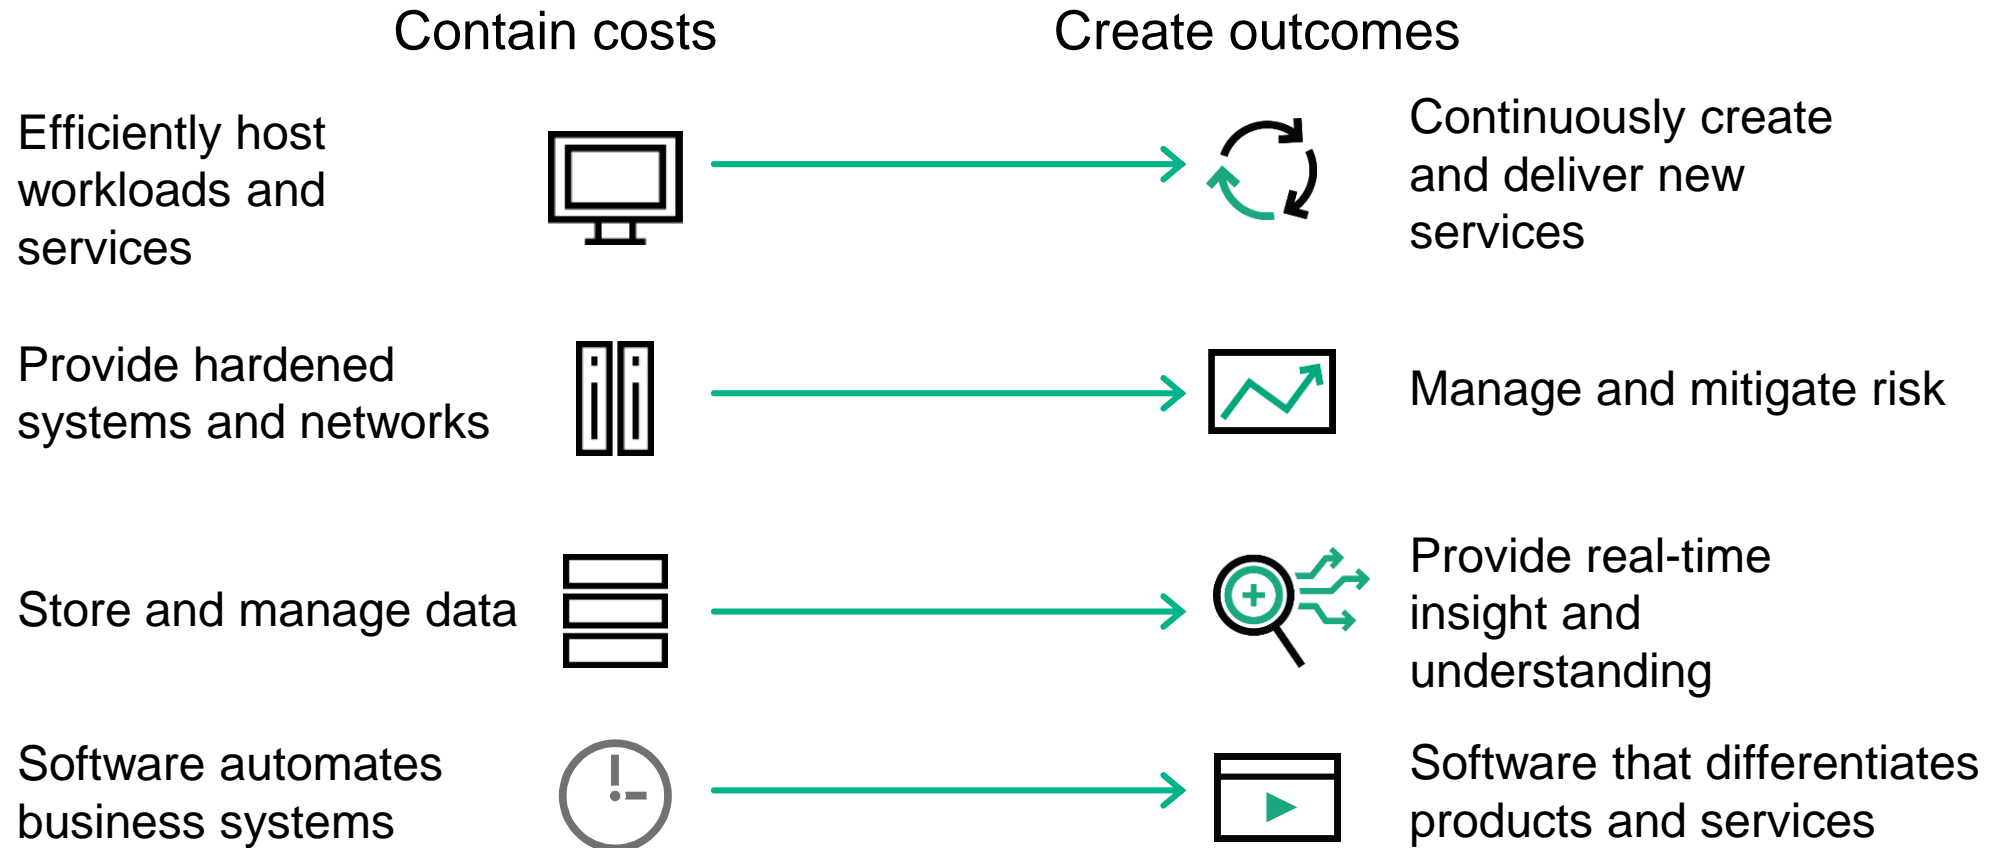

# Time to value is priority #1

# To respond, IT must become a value creator and bridge traditional and new

## Journey to the New Style of Business

**Transform**  
to a hybrid  
infrastructure

**Protect**  
your digital  
enterprise

**Enable**  
workplace  
productivity

**Empower**  
the data-driven  
organization

# How to accelerate your journey with HPE

## Converge & Virtualize

## Integrated Systems

Modernize and Virtualize your legacy Apps  
with

HPE Servers, featuring HPE ProLiant Gen 9

HPE Storage featuring HP 3PAR, HPE  
StoreOnce

HPE Networking & HPE Aruba

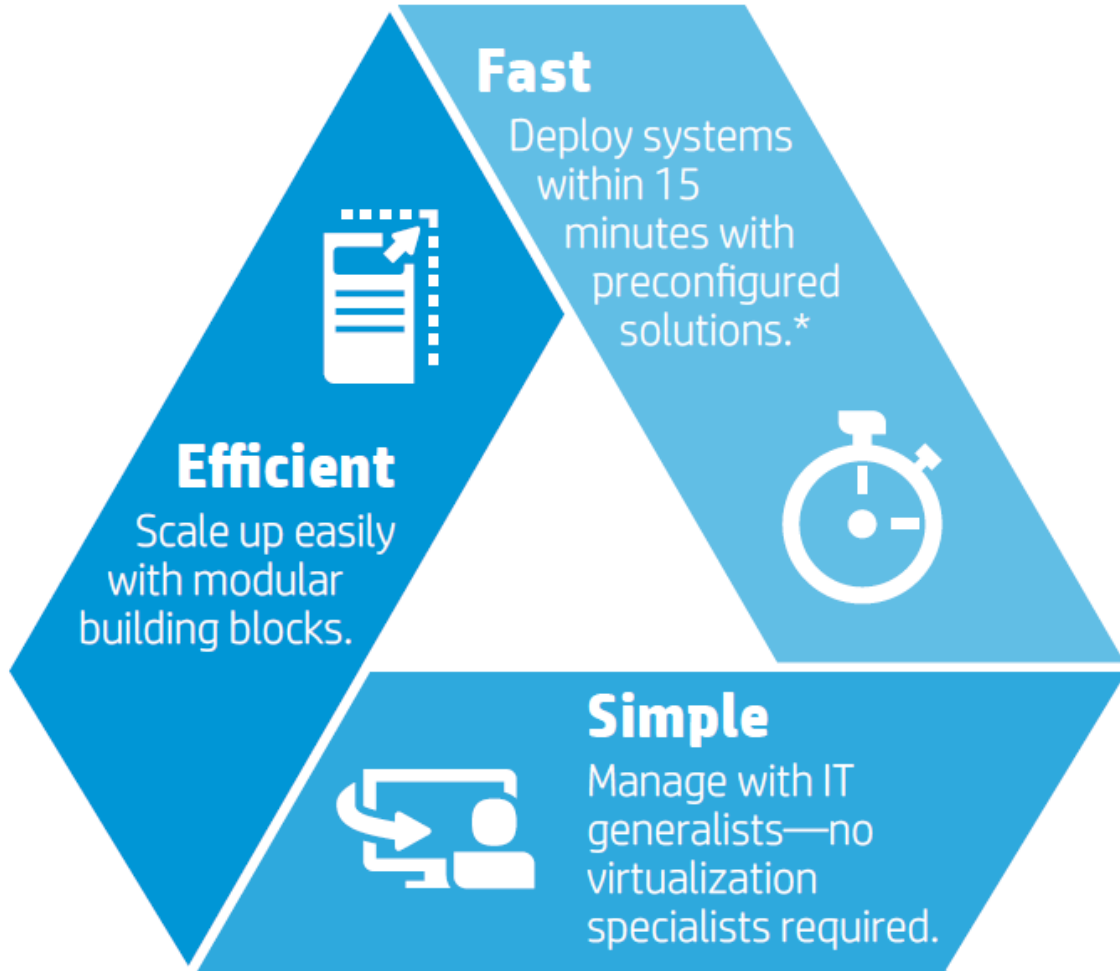

Accelerate your projects with  
HPE Converged Systems

# HPE ConvergedSystem 700 Overview

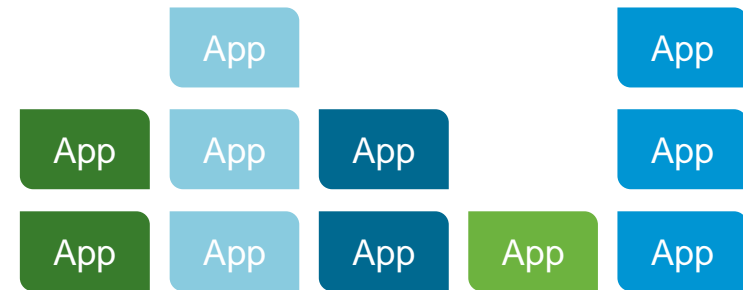

- Specified list of qualified hardware components
  - A specific list of hardware (server, storage, networking) that are architected together within a range of quantities
- Qualified software from HPE, VMware and additional partners
  - Can be ordered as Foundation (bare metal stack) or VMware (with prescribed software bundle)
  - Qualified Reference Architectures, hypervisors and cloud layers may also be layered on top of the solution
- Preintegration and delivery
  - Follows HP complex integration designs and solution software configuration parameters
- Solution Level Support
  - Utilizes HPE Care Packs to provide solution level experience

# HPE Hyper-convergence environment

Medium-sized businesses  
Enterprise ROBO  
Line of Business

Simple building block for the software-defined datacenter

# The Next Big thing at HPE

## Composable Infrastructure

vmware®

 Hewlett Packard  
Enterprise

# The Idea Economy creates disruptive waves of new demands and opportunities

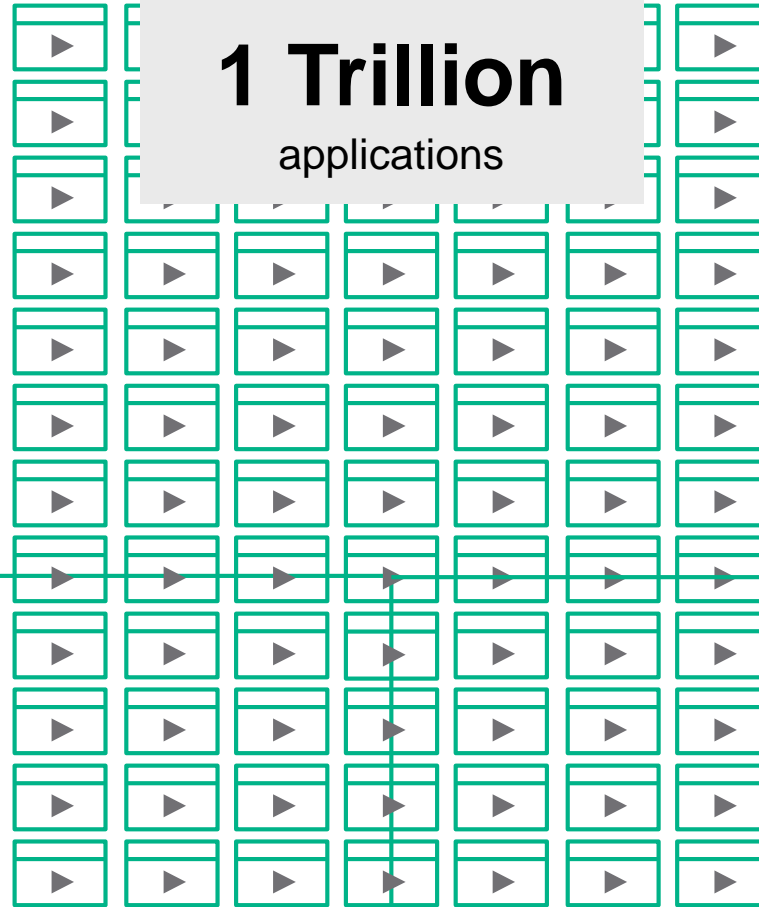

for New Style of Business

Thriving in the Idea Economy requires speed

**100 Billion**  
connected  
devices

**1 Trillion**  
applications

**1000X**  
faster

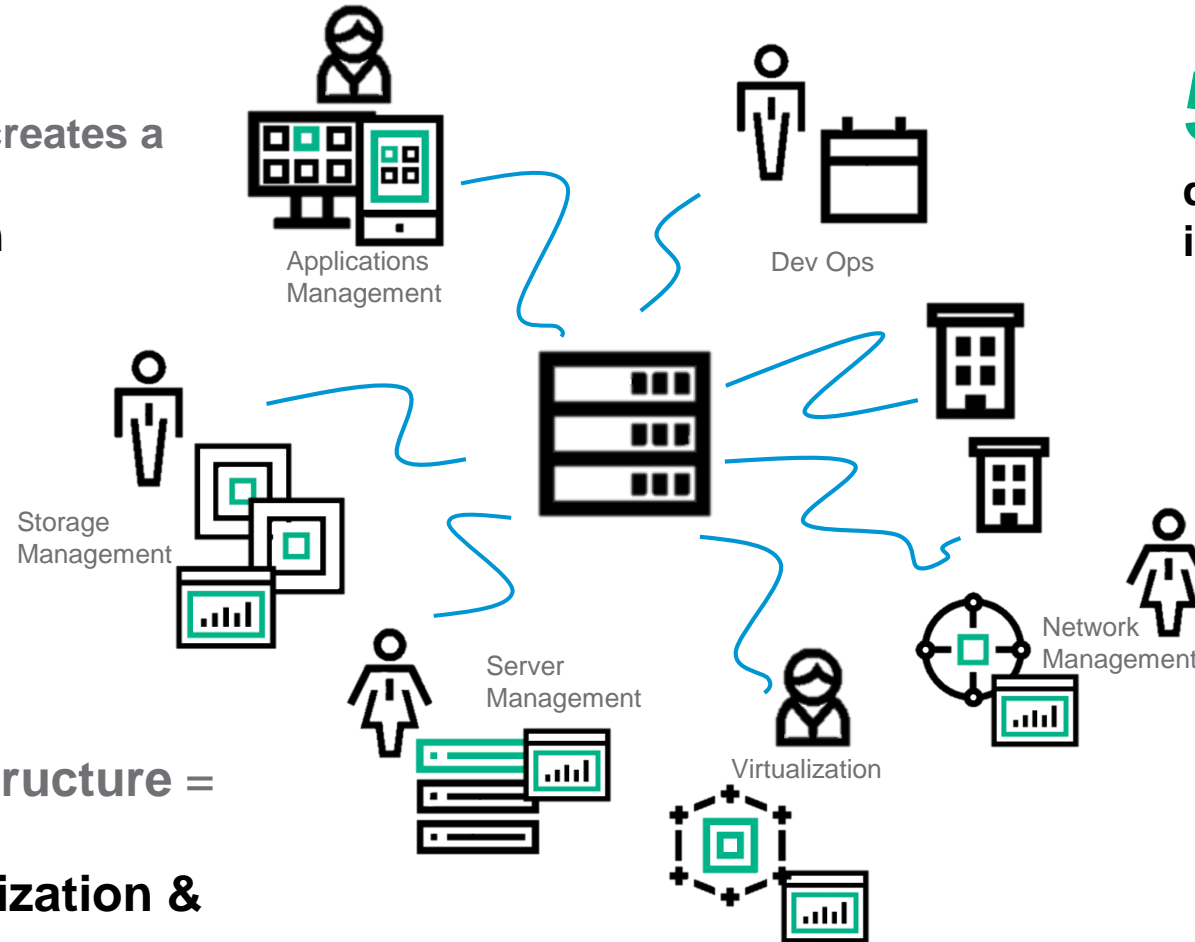

2020

# Complexity inhibits speed and drives up costs

Every **25%**  
of added functionality creates a  
**100%** increase in  
complexity (Gartner)

**5-6 months** – avg.  
duration to deploy new app  
infrastructure (IDC)

**\$1** spent on infrastructure =  
**\$3** spent on virtualization &  
management tools (IDC)

**25 days** – average time to  
deploy a new service (IDC)

# In the Idea Economy, IT is the business partner for value creation

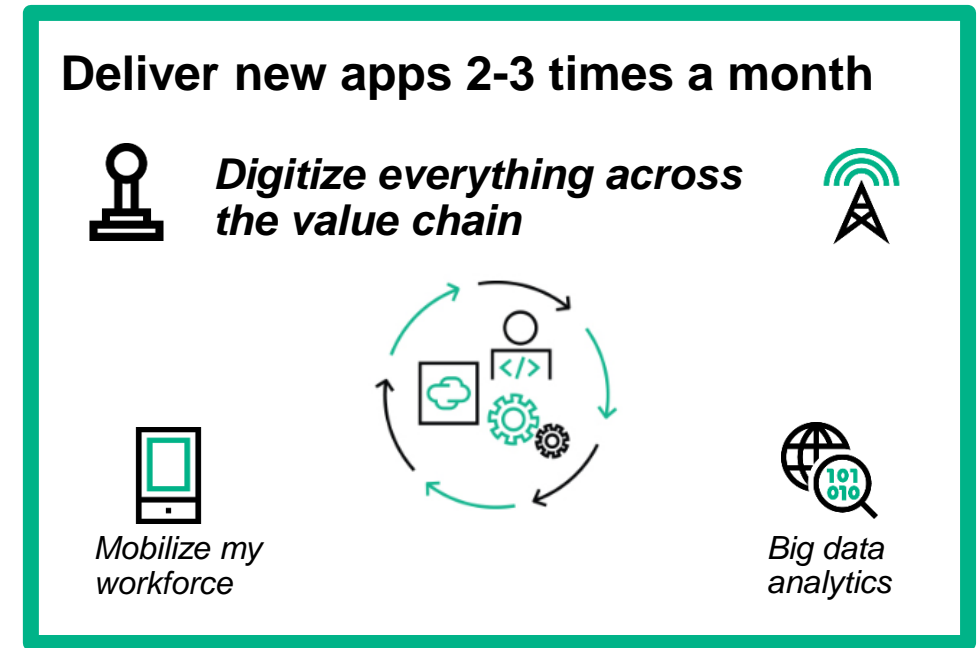

IT must now be able to support two operating environments

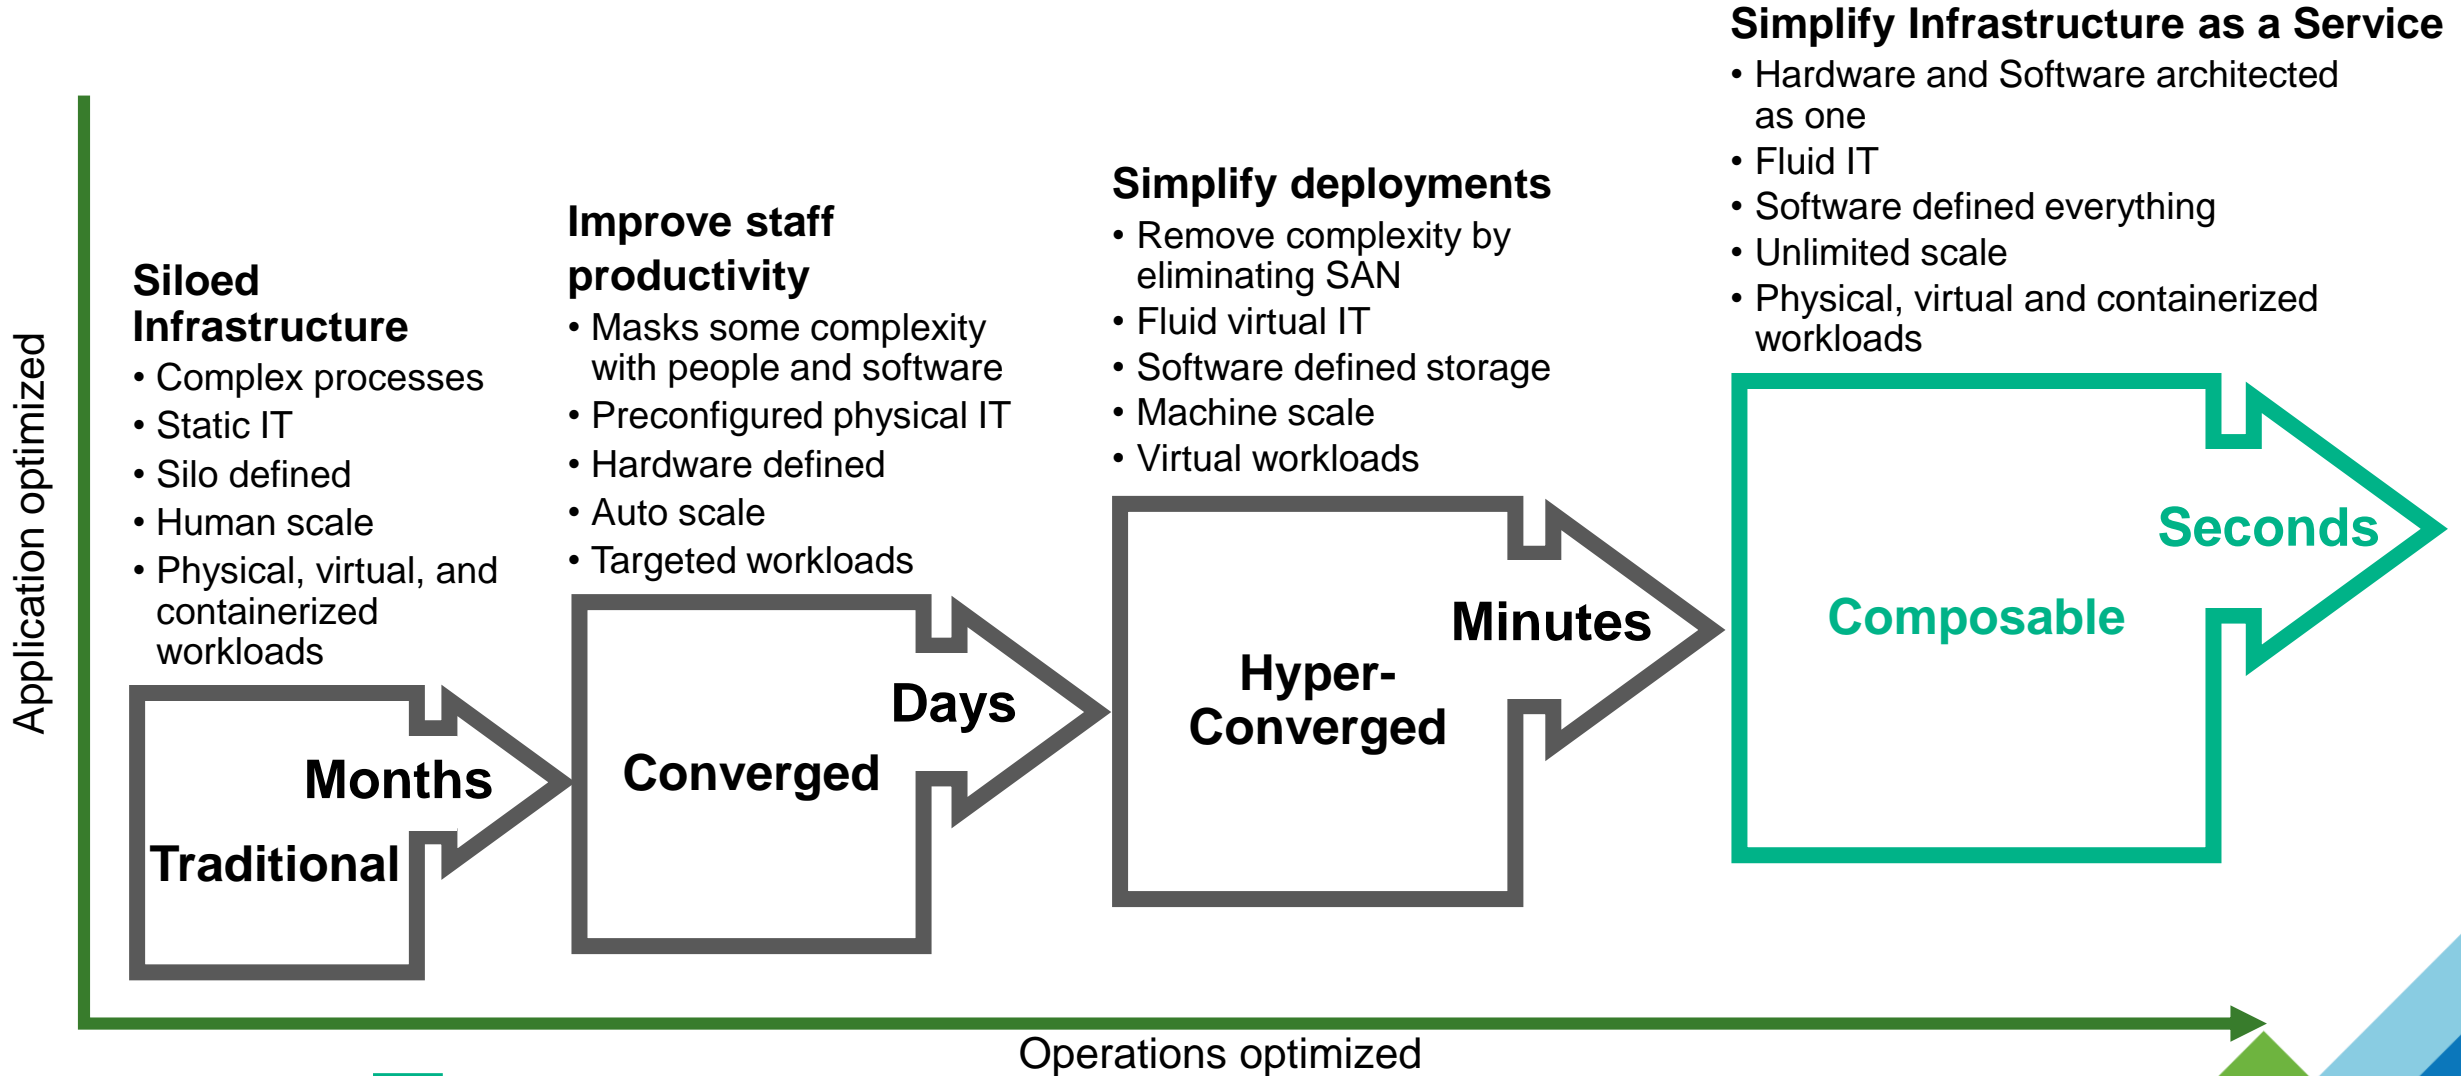

# Example of a large energy company's challenge

*"Simplify and cost reduce the apps which Run the Business"*

*"Enable me to accelerate the time from opportunity identification to value creation"*

# A new category of infrastructure is needed to power the Idea Economy

# Composable Infrastructure is the engine for the Idea Economy

## REDUCE

over provisioning  
and CAPEX

**Precisely compose any compute with any storage pool**

- Quickly recompose across racks and rows in seconds
- SDS, DAS and SAN in the infrastructure

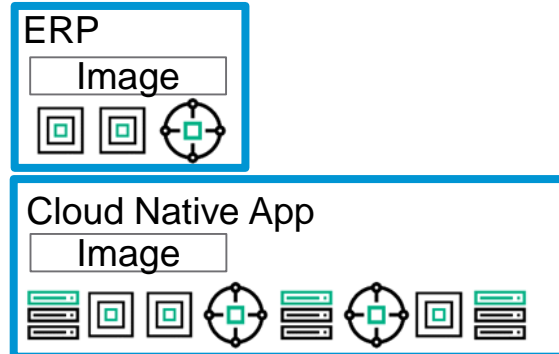

## DEPLOY

at cloud-like  
speed

**Power up to a portal in minutes**

- Self-discovery, auto-integration of all resources
- Bare metal through OS provisioning in seconds
- Compose disaggregated stateless resources

## DEVELOP

more apps,  
faster

**Program Infrastructure the way you want**

- Single line of code for full infrastructure programmability
- Stand up infrastructure in minutes not months

## UPDATE

firmware  
seamlessly

**Frictionless operations reduce operational effort**

- Templates define how the infrastructure needs to function
- Single firmware/drivers updates aligned to maintenance window

# Composable Infrastructure defined

## Fluid Resource Pools

- Single infrastructure of disaggregated pools of compute, storage and fabric that boots-up ready for any workload
- Physical, virtual and containers
- Auto-integrating of resource capacity

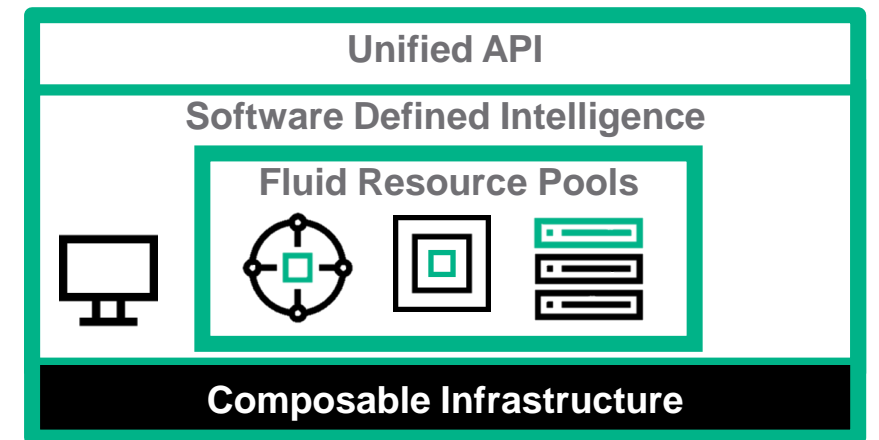

## Software-Defined Intelligence

- Template-driven workload composition
- Frictionless operations

## Unified API

- Single line of code to abstract every element of infrastructure for full infrastructure programmability
- Bare metal interface for Infrastructure as a Service

# Available through Project Synergy today

Building the Composable Infrastructure ecosystem

## Composable Infrastructure API

Enabling interoperability between applications

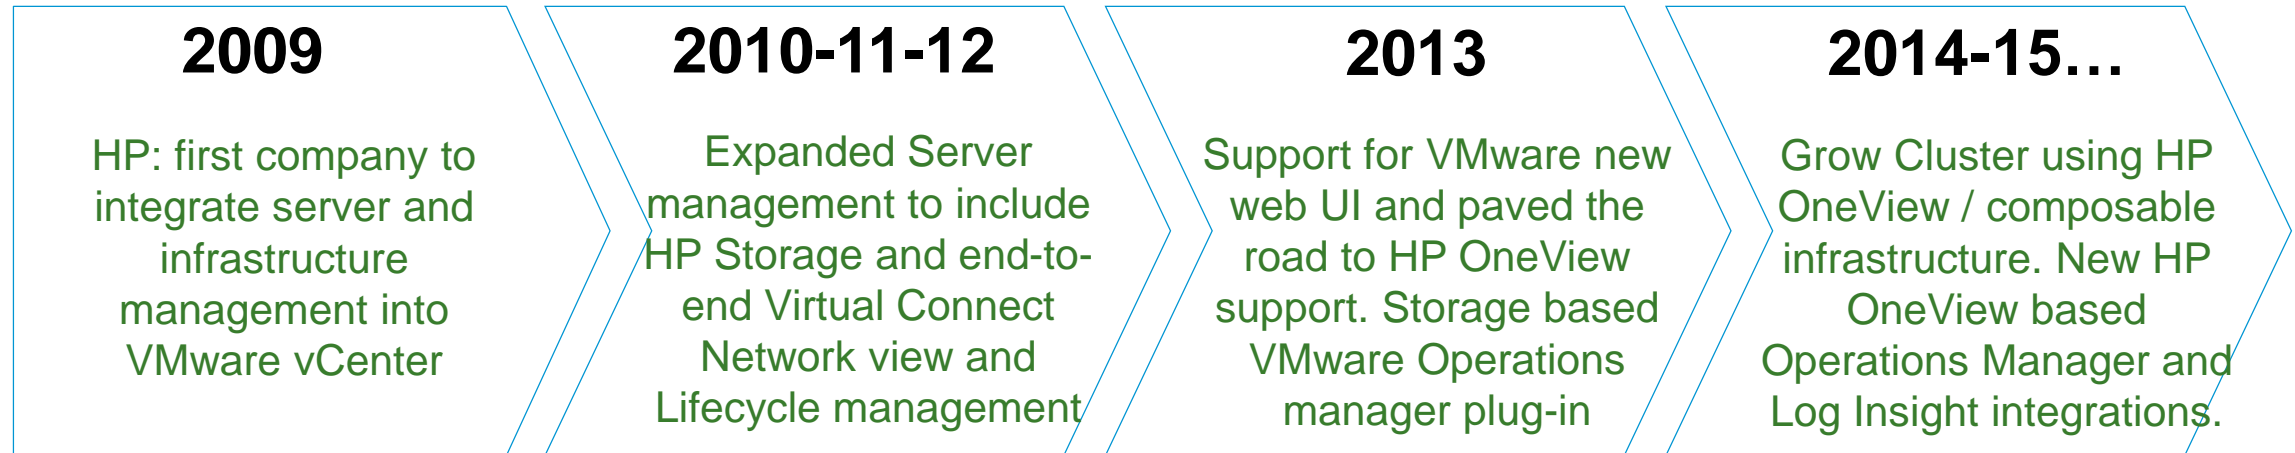

that make the infrastructure programmable

## HP Composable Infrastructure Partner Program

Including SDK, partner lab, and technical assistance

# Leadership virtualized infrastructure management with VMware

First partner to use composable infrastructure API's!
