iSource 13.02

eSourcing solution from Zycus

The next release of iSource will comprise of lots of new and updated features to enhance the functionality of the system. Some of the features are as follows:

- **Regret email feature:** This feature will help the buyers to keep transparent communication with Suppliers in order to maintain healthy supplier relationship by sending regret email to suppliers who were not awarded in event
- **Configurable Event URL:** This feature will help the companies to invite suppliers to URL of their choice (company portal) and then redirect to iSource.

iContract 13.02

Contract lifecycle management solution from Zycus

In the new release of iContract there are changes made to both the Authoring as well as the Repository module.

Authoring module: The new release will have enhanced version management for all the supporting documents uploaded in a Contract via the Attachments Tab in Authoring module. In addition to version management, the new release will also have extended side-by-side comparison of supporting documents uploaded in MS Word format.

Repository module: Users will be introduced to a new feature to clone contracts in the repository module. This feature will address the need of Contract Managers who do not want to use iContract Authoring module and want to create & sign a contract outside the system. This feature is aimed at reducing the data entry efforts of the Contract Manager.
