

AREA MATCH

 **Doubles!**

2 teams, at least
2 players on each
team

 **Serve!**

Two-color counters
(red and yellow)

Volley!

- 1 One team is Red. The other is Yellow.
- 2 A player from the Red team places a red counter on one figure on the game board and finds the area of that figure in square units. A teammate places a red counter on the figure that is congruent. The Yellow team determines whether the chosen figures have the same area. If they do, leave the counters on the game board. If the figures are not congruent, remove the counters.
- 3 Then the Yellow team places a yellow counter on one of the figures that does not already contain a counter, and the game continues.
- 4 Teams take turns until all figures have been claimed.
- 5 The team with the greater number of counters on the game board wins.
